IP Video Door Stations

The future belongs to IP video door intercoms, because due to the many fields of application, the high resolution of the camera, the integration possibilities of IP door intercoms with video are much larger than those of an analogue intercom system.

The external station of the IP door station is connected via the router (connected to the Internet). As indoor stations, smartphones / mobile phones, tablets or fixed indoor stations can be used.

It is possible to talk to visitors via an app (Android and iOS) with video and sound. This allows you to answer calls on the go or during holidays. For example, you can tell the postman to leave the parcel with your neighbour or the visitor should wait a few minutes until you are at home - or you can open the door directly with your mobile phone app.
